

Guest Bathroom - Bathtub Toe Tap Drain

The drain in the bathtub is operated by **Pushing / Depressing** the round fixture. Depress this with your hand while leaning over the tub, or with your toe while standing in the tub.

There is no lever to turn to operate the drain. It is operated solely by depressing the plug. Depress it and the drain opens for use with showering. Depress it again and the drain closes for bathtub water fill use.

Don't try to pull it out. It won't come out. It is screwed into place. You will likely break it.

For replacement purposes:

Go to YouTube and look up "Bathtub toe tap drain replacement".

The top chrome round part comes off. Unscrew it. Then get a screwdriver to turn the plastic to loosen it. Then unscrew it and it can be removed.

Take it to hardware store and buy another one exactly like it. Reverse the instructions above to install the new one.
